# PROJECT MANAGEMENT MODULE

Monitor tasks, manage timelines and deliver projects through one central interface

Identify activity metrics and available resources for predicting your project completion

When managing complex projects from start to finish, the ability to make real-time adjustments to project scope, resource availability, and overall project and resource margins is important.

Dynamic and innovative projects require constant attention to timeline, scope, and internal communication. For companies who are using generic tools such as PowerBI or Excel, customizing your software work-environment simply isn't an option.

What if your software worked for you and not against you...

# Drive project value

Assess the viability of potential projects and track the performance of ongoing initiatives

Naologic's project management tool is very user-friendly and flexible, allowing for the platform to be easily adopted into any organization. Designed for rapid time to value, the tool can both be seamlessly integrated into your existing systems or be used as a standalone solution.

# **Plan and Organize**

# Discuss, share, collaborate

Compare forecasts with real timesheets for increased profitability. Share the files in real time and store all messages related to the project.

Keep track of deadlines and progress of your projects with a clear overview. Plan ahead for upcoming projects with forecasts based on comparable projects. Assist teams in responding to the unpredictability of constructing software through the use of incremental, iterative work sequences, that are commonly known as sprints. This will allow your team to develop hypotheses and rapidly prototype potential product additions/changes in a manner that corresponds with agile development methodologies.

# The tools and controls your team needs.

Admin controls Keep your data under control

Feel confident that your information is secure by designating admins to control your organization's usage and set security controls

#### Privacy

The right access to the right people

**S**ome work is sensitive - control project and team privacy and access settings to ensure that the work stays in safe hands

#### **Custom fields**

Track key information easily.

Projects can be very unique, even within certain fields of work. Track unique key data with custom fields and keep the information that is most important to your team or company in the spotlight.

## Multiple clear project perspectives

#### Kanban boards

#### See the work moving.

Tasks are easily monitored and logged through the kanban view. Filter tasks to drill down further. Simplicity facilitates focus, while the task detail view ensures that key task information is not lost.

#### Timeline

# Targets, goals, deadlines, deliverables.

Timeline view allows your team to create a plan that highlights key task dependencies and helps track affected targets and deadlines as the project progresses.

#### Dashboards

The work in clear view

See what is on track and what is lagging in clear and customizable dashboard views.

#### Clear project schedule perspective

View the work schedule clearly and automatically on a calendar. Eliminate manually transferring task timing to the calendar to ensure that there are not schedule oversights or conflicts.
